Voting system

Database configuration

Application is coupled with **MySql** database. By default it is using such credentials to database:
user: **root**
password: **password**
Application is connecting to database on address **127.0.0.1:3306**.

Such user has to be created with permissions to database **vote_system**. In file **tables.sql** there is script to create proper database and tables.

Running application

First run of application has to be made with additional argument to initialize database with data. In order to make first run, command below has to be used:

java -jar VoteCalculator-0.0.1-SNAPSHOT.jar first

Another instances of application has to be run without additional argument:

java -jar VoteCalculator-0.0.1-SNAPSHOT.jar
